**WITH THE NEW IMPROVED PENICILLIN-V**

'V-CIL-K' brand penicillin V potassium is the most efficient oral penicillin yet developed. It combines the acid stability of penicillin V with very rapid absorption. High therapeutic levels are swiftly attained and peak concentrations are reached within thirty minutes.

'V-CIL-K' provides the convenience of oral penicillin with the speed and sureness of the parenteral route. Whether judged by blood levels or by clinical results, it is fully as effective as intramuscular penicillin G.

'V-CIL-K' may be used whenever penicillin is indicated, even in serious infections hitherto requiring parenteral treatment. The dose is 125-250 mg. four times daily. The cost is identical with that of penicillin V. Available as tablets of 60 mg., 125 mg. and 250 mg.
