

INTERNATIONAL

BULL FERTILITY CONFERENCE

27-30
MAY 2018
WESTPORT
CASTLECOURT HOTEL
IRELAND

Reproductive performance of dairy and beef herds is vital to the profitability and sustainability of cattle farms.

But while science has focused on ways to improve cow fertility, research into aspects of male fertility has so far lagged behind.

Join experts from across the globe as they discuss the significant developments and challenges facing bull fertility, from the way genomically-assisted selection has revolutionised the dairy industry, to reliably predicting the fertility of individual bulls in the laboratory.

Specialists from academia, veterinary practice and industry will also discuss topics on male reproductive physiology, nutrition and puberty, and the genomics of bull fertility.

Other topics will include optimisation of semen collection and processing, fertility of AI bulls, pathophysiology of bull subfertility, sex-sorting of semen, sperm-oocyte-reproductive tract interactions and thermoregulation.

Revolving around three days of scientific sessions, including workshops on semen evaluation, bull reproduction and a troubleshooting forum, the conference will also include poster sessions and an exciting social programme.

THEORY to PRACTICE

UNIVERSITY of LIMERICK
OLLSCOIL LUIMNIGH

British Society of Animal Science

The British Society of Animal Science aims to provide an opportunity for those with an interest in animals and animal science to exchange views, ideas and information. It is an energetic and active society with about 1000 members from over 50 countries throughout the world. Today, as ever, the Society is the natural meeting point for all of those with an interest in animal science. Its membership is drawn from research, education, advisory work, commerce and practical animal keeping.

The Society's Journal is *Animal* which publishes high quality fundamental and applied research and is an exciting international journal of animal bioscience. *Animal* publishes cutting edge research, hot topics and horizon-scanning reviews on animal-related aspects of the life sciences.

The Society organises major scientific and specialist conferences on key issues facing the science related to animals.
