Language Teaching is a well-established and unique research resource for both professionals and students in the broad area of second and foreign language teaching and learning. Volume 41 (2008) marks a turning point in the journal's history. While specially commissioned articles continue to survey up-to-date research on specific key topics, new strands of articles review recent second language acquisition and teaching research conducted in individual countries and also research on the teaching of languages other than English. There is a special series of plenary and keynote speeches from recent international conferences as well as annual reports from research groups around the world, including those from IATEFL, AAAL and BAAL. A further section is dedicated exclusively to empirical research papers which follow a replication approach in their methodology.
