The Journal of Laryngology and Otology

(Founded in 1887 by MORELL MACKENZIE and NORRIS WOLFENDEN)

EDITED BY

WALTER HOWARTH

WITH THE ASSISTANCE OF

G. H. BATEMAN R. G. MACBETH V. E. NEGUS
R. SCOTT STEVENSON J. F. SIMPSON

1. Original Articles are accepted on the condition that they have not been published elsewhere.
2. Manuscripts should be typewritten, on one side only of the paper, and well spaced.
3. Galley proofs and engraver's proofs of illustrations are sent to the author. Corrections, which should be kept to a minimum, must be clearly marked, and no additional matter added.
4. Blocks illustrating articles are normally paid for by the *Journal*. Authors may, however, be required at the Editor's discretion, to contribute towards the cost of these in cases where this is particularly heavy.
5. Orders for reprints should be sent when returning galley proofs, and for this purpose special forms are supplied.
6. Authors of original communications on Oto-Laryngology in other journals are invited to send a copy, or two reprints, to the *Journal of Laryngology*. If they are willing, at the same time, to submit their own abstract (in English, French, Italian, or German) it will be welcomed.
7. Editorial communications may be addressed to THE EDITOR, *Journal of Laryngology*, c/o HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.
8. The annual subscription is three guineas sterling, post free, and is payable in advance.
9. Single copies will be on sale at 7s. 6d. each; copies of parts up to Vol. LXIII may be purchased at 4s. each.
10. All subscriptions, advertising and business communications should be sent to the publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2.

United States of America

Orders for this *Journal* may be sent either through a local bookseller, or to MESSRS. G. E. STECHERT & Co., 31-33 East 10th Street, New York, or they may be sent direct to the publishers, HEADLEY BROTHERS, 109 Kingsway, London, W.C.2, England.

THE AMPLIVOX AUDIOMETER

The Basic Instrument of Modern Otology

NEW TESTS NOW POSSIBLE

Speech-loss measurement in decibels now obtainable through dynamic microphone and speech input meter.

Loudness balance control gives measurement of the recruitment factor.

Input for group-test equipment and gramophone.

CONSISTENT ACCURACY OF RESULTS

Eleven exact test frequencies 125-12,000 c.p.s.

Voltage compensation ensures that signal intensity does not vary should mains voltage do so.

CALIBRATED MASKING TONE

Masking intensity varies equally with normal hearing acuity over range 125-4,000 c.p.s., permitting accurate masking control. Calibrated in decibels.

SIMPLICITY OF OPERATION

Twin matched headphones (on double headband) for all air conduction tests; bone conductor on single headband, or interchangeable with one 'phone.

Hearing Loss dial calibrated in 5 dB steps from minus 10 dB to plus 100 dB.

Same figures on dial are read for air and bone conduction, and for all frequencies.

Full details are available from the manufacturer, who will gladly arrange demonstrations, if required.

PRESCRIBE THE EASY EFFECTIVE METHOD

When spraying, the patient can hold his head in a natural position, yet the solution spreads throughout the nasal cavity, assuring thorough treatment. Effective dropper-application, on the other hand, requires a complicated posture technique which patients are apt to neglect in home treatment.

**DeVilbiss
ATOMIZERS**

DROPPER ?

ATOMIZER?

These illustrations, which are based on X-ray research, clearly demonstrate the advantages of the atomizer as compared with the dropper

POST-TONSILLECTOMY COMFORT
through 'SALIVARY ANALGESIA'

The pain of traumatized tissues following tonsillectomy, demands its own relief—and points the need for analgesia that quickly reaches the irritated area.

ASPERGUM provides 'salivary analgesia' through the simple act of chewing—it brings pain-relieving acetylsalicylic acid into *intimate* and *prolonged* contact with the tonsillar

region, seldom reached even intermittently by gargling. The rhythmic stimulation of muscular action also aids in relieving local spasticity & stiffness: more rapid tissue repair is promoted. Each pleasantly flavoured chewing gum tablet provides 3½ grains acetylsalicylic acid, permitting frequent use. Particularly suitable for children.

Aspergum

for more than two decades a dependable and welcome aid to patient-comfort

Ethically promoted in packages of 16 tablets and moisture proof bottles of 36 and 250

S·D·2
CLINIC
AUDIOMETER

This instrument offers many unique and valuable features which allow a most comprehensive range of tests to be made. In addition its metred output ensures a constant result under all conditions of voltage and valve life.

It incorporates a reversible manual interruptor, automatic interruptor, calibrated masking, provision for speech tests with or without gramophone records and Recruitment Tests by the loudness balance method, and Luscher's monaural method.

Write for an illustrated brochure giving full details of this superb instrument.

SD-3

**PORTABLE
AUDIOMETER**

Here is a really Portable Audiometer providing the essentials for audiometry and made to the same high standard as the SD/2.

11 fixed frequencies are provided with single zero reference levels for air and bone conduction, calibrated masking, a built-in crystal microphone and a metered output. Facilities are available for Loudness Balance Recruitment Tests.

Write for an illustrated descriptive brochure.

Aurally Speaking

In the measurement of hearing loss, the Pure Tone Audiometer, TF895, conforms to the specification of the Committee on Electro-Acoustics appointed by the Medical Research Council. Each instrument is individually calibrated against N.P.L. determinations and will therefore provide a reading, on a given patient, comparable with that of any other Marconi Audiometer. Orally instructed through a crystal microphone and high-fidelity earphones, the patient responds via a signal lamp built-in to the instrument panel. Please ask for further information of this improved aid to audiometry.

A Significant Advance in AUDIOMETRIC TECHNIQUE

Produced as the result of consultations with Medical Authorities, both in this country and abroad, the Belclere A.2.A. Audiometer incorporates all the improvements rendered desirable in the light of practical experience.

Among other distinguishing features is the inclusion of dual calibration, with twin attenuators, for binaural recruitment tests. Provision is also made for gramophone recorded speech tests.

Write for our free, comprehensive brochure, "Modern Audiometric Technique". An authoritative work on the constructive and operative principles of modern Audiometers and their uses.
