PIONEERING ECONOMIC THEORY, 1630–1980

A Mathematical Restatement

BY HANS BREMS

In a *tour de force* both sweeping and elegant, Hans Brems charts the evolution of economic thought from 1630 to the present. Applying current theory and mathematics to the ideas of earlier periods, Brems provides rich new insights for economics past and present.

After surveying the history and principal economic themes of a period, Brems offers intensive explications of individual thinkers, quoting directly from their works and reformulating their theories in current mathematical terms. He not only elucidates particular ideas but demonstrates their relationship to economic theory today.

One of England's most prominent social historians here recounts the story of the growth of the Victoria Wine Company from one small London shop to its present near-institutional stature. BETTING ON IDEAS
