SIR JOHN PRINGLE

Medicine

Books and Journals from
Cambridge University Press

The Cambridge Medicine programme focuses its book publishing in a defined set of core clinical areas with our great strength in the clinical brain sciences. Other specialties of significant focus include reproductive medicine/obstetrics and gynaecology, anaesthesia and critical care, emergency medicine and pathology.

Our journals programme covers a broad spectrum of medical disciplines including emergency and disaster medicine, epidemiology and infectious diseases, biomedical science, genetics, nutrition, mental health and psychiatry, and neuroscience.

We partner with many learned societies including The Society for Healthcare Epidemiology of America, the Neuroscience Education Institute, and the Royal College of Obstetricians and Gynaecologists.

CAMBRIDGE
UNIVERSITY PRESS

CONTENTS

Original Articles

- 879** Temporal trends in ambulatory antibiotic prescription rates in South Carolina: Impact of age, gender, and resident location
Hana R. Winders, Julie Royer, Mariam Younas, Julie Ann Justo, P. Brandon Bookstaver, Sharon B. Weissman, Linda Bell, Katie S. Waites, John Plante and Majdi N. Al-Hasan
- 883** Impact of rapid diagnostics with antimicrobial stewardship support for children with positive blood cultures: A quasi-experimental study with time trend analysis
Alison C. Tribble, Jeffrey S. Gerber, Warren B. Bilker and Ebbing Lautenbach
- 891** Pediatric ambulatory catheter-associated urinary tract infections (CAUTIs): Incidence, risk factors, and patient outcomes
Michael L. Rinke, Suzette O. Oyeku, Moonseong Heo, Lisa Saiman, Philip Zachariah, Rebecca E. Rosenberg, Patricia DeLaMora, Barbara Rabin, Parsa Mirhaji, Elizabeth Klein, William J. H. Ford, Oghale Obaro-Best, Michael Drasher, Alexandre Peshansky, Kelly Ann Balem and David G. Bundy
- 900** Epidemiological and genetic characterization of *Clostridium butyricum* cultured from neonatal cases of necrotizing enterocolitis in China
Yinping Dong, Ying Li, Di Zhang, Scott Nguyen, Nikunj Maheshwari, Yujie Hu, Yu Cao, Fengqin Li and Séamus Fanning
- 908** Oral vancomycin prophylaxis against recurrent *Clostridioides difficile* infection: Efficacy and side effects in two hospitals
Ioannis M. Zacharioudakis, Fainareti N. Zervou, Yanina Dubrovskaya and Michael S. Phillips
- 914** Prescriber perceptions of fluoroquinolones, extended-spectrum cephalosporins, and *Clostridioides difficile* infection
Julia E. Szymczak, Brandi M. Muller, Nikitha Shankar Shakamuri, Keith W. Hamilton, Jeffrey S. Gerber, Maryrose Laguio-Vila, Ghinwa K. Dumyati, Scott K. Fridkin, Alice Y. Guh, Sujan C. Reddy and Ebbing Lautenbach for the CDC Prevention Epicenters Program
- 921** Description of a pharmacist-driven safety algorithm in *Staphylococcus aureus* bacteremia: Compliance, interventions, and good saves
Tara H. Lines, Whitney J. Nesbitt, Matthew H. Greene and George E. Nelson
- 926** Control of a hospital-wide outbreak of carbapenem-resistant *Acinetobacter baumannii* (CRAB) using the Israeli national carbapenem-resistant Enterobacteriaceae (CRE) guidelines as a model
Danny Alon, Hadar Mudrik, Michal Chowers and Pnina Shitrit

- 931** Impact of an automated hand hygiene monitoring system combined with a performance improvement intervention on hospital-acquired infections
Bryan C. Knepper, Amber M. Miller and Heather L. Young

- 938** Total cost of surgical site infection in the two years following primary knee replacement surgery
Lynn N. Lethbridge, C. Glen Richardson and Michael J. Dunbar

Commentaries

- 943** Challenges of infection prevention and control in Scottish long-term care facilities
Le K. N. Nguyen, Itamar Megiddo and Susan Howick
- 946** Impact of COVID-19 on traditional healthcare-associated infection prevention efforts
Michael P. Stevens, Michelle Doll, Rachel Pryor, Emily Godbout, Kaila Cooper and Gonzalo Bearman

Review

- 948** A primer on data visualization in infection prevention and antimicrobial stewardship
Jorge L. Salinas, Jeffrey Kritzman, Takaaki Kobayashi, Michael B. Edmond, Dilek Ince and Daniel J. Diekema

Concise Communications

- 958** Covid-19 and the N95 respirator shortage: Closing the gap
Daniel Noguee and Anthony J. Tomassoni
- 959** Method to the madness: Impact of method of contact on intervention acceptance rates for antimicrobial stewardship interventions
Ryan W. Stevens, Hannah D. Fjeld, Coleman Cutchins and Benjamin P. Westley
- 962** Transfer of methicillin-resistant *Staphylococcus aureus* by fist bump versus handshake
Natalia C. Pinto-Herrera, Lucas D. Jones, Wilson Ha, Heba Alhmidi, Daniel F. Li, Brigid M. Wilson and Curtis J. Donskey
- 965** Detecting carbapenem-resistant *Acinetobacter baumannii* (CRAB) carriage: Which body site should be cultured?
Amir Nutman, Elizabeth Temkin, Jonathan Lellouche, Debby Ben David, David Schwartz and Yehuda Carmeli

Research Briefs

- 968** Screening for COVID-19: Patient factors predicting positive PCR test
Douglas W. Challener, Gregory J. Challener, Vanessa J. Gow-Lee, Madiha Fida, Aditya S. Shah and John C. O'Horo

969 Outpatient *Clostridioides difficile* infections: An opportunity for antimicrobial stewardship programs
Austin R. Morrison, Rachel M. Kenney and Susan L. Davis

971 Influenza vaccination medical waivers among healthcare workers at an academic health system
Julia C. Barnes, Megan LeClair-Netzel, Nicole Kalscheur, Mallory Wagner, Emma Gracon, Maggie Steingraber-Pharr, Beth Potter, Freddy Caldera and Mary S. Hayney

Letters to the Editor

974 The COVID-19 outbreak: The issue of face masks
Ming-Wei Wang, Yong-ran Cheng, Lan Ye, Meng-Yun Zhou, Juan Chen and Zhan-hui Feng

975 Development of a protective device for RT-PCR testing SARS-CoV-2 in COVID-19 patients
Tomoya Tsuchida, Shigeki Fujitani, Yukitaka Yamasaki, Hiroyuki Kunishima and Takahide Matsuda

976 How to deal with 2019 novel coronavirus (COVID-19): Public health practices from the Centers for Disease Control and Prevention in Zhanggong District, Ganzhou City, China
Peisheng Xiong, Kai Xu and Guang Xiao

978 Application and effects of fever screening system in the prevention of nosocomial infection in the only designated hospital of coronavirus disease 2019 (COVID-19) in Shenzhen, China
Ting Huang, Yinsheng Guo, Shaxi Li, Yanqun Zheng, Lin Lei, Xianhu Zeng, Qiao Zhong, Yingxia Liu and Lei Liu

982 Nosocomial infection among patients with COVID-19: A retrospective data analysis of 918 cases from a single center in Wuhan, China
Yan He, Wei Li, Zhen Wang, Huilong Chen, Lei Tian and Dong Liu

983 SARS-CoV-2: The Lombardy scenario in numbers
Andrea Molinari, Federico Pistoia and Giuditta Antonelli

984 The largest epicenter of the coronavirus outbreak in Vietnam
Trang H.D. Nguyen and Danh C. Vu

986 An effective model for the outpatient management of COVID-19
Yuanyuan Xiao, Caixia Tan, Juping Duan, Anhua Wu and Chunhui Li

987 Alert for SARS-CoV-2 infection caused by fecal aerosols in rural areas in China
Xiujuan Meng, Xun Huang, Pengcheng Zhou, Chunhui Li and Anhua Wu

988 Society coexisting with COVID-19
Kazuhiro Tanabe

989 COVID-19 as a psychological contagion: A new Pandora's box to close?
Dua Azim, Sohail Kumar, Sundus Nasim, Taha Bin Arif and Deedar Nanjiani

- 991** RE: Role of rapid diagnostics for viral respiratory infections in antibiotic prescribing decision in the emergency department, by Li et al (2019)
Danielle A. Rankin, Peter F. Rebeiro, Zaid Haddadin, Natasha B. Halasa and Robert A. Greevy
- 992** Role of telehealth in outbreaks—Where the classical healthcare systems fail
Ata Mahmoodpoor, Mohammad Amin Akbarzadeh, Sarvin Sanaie and Mohammad-Salar Hosseini
- 994** Antibiotic price rise and antibiotic stewardship programs—Stimulus or discouragement?
Felipe Francisco Tuon, Joao Paulo Telles, Juliano Gasparetto and Tiago Zequinão
- 995** Achieving and maintaining low rates of hospital-onset *Clostridioides difficile*
Megan Rose Carr LaPorte and Lou Ann Bruno-Murtha
- 997** First report of IMP-1 in a clinical isolate of *Escherichia coli* in Latin America
Priscila Lamb Wink, Evelyn Kern Almeida, Marina Niada Crispim, Daiana de Lima-Morales, Alexandre P. Zavascki and Afonso Luís Barth
- 998** The *Legionella* contamination of tap water in a brand-new hospital in Japan before patients move in
Itaru Nakamura, Yuri Miura, Ayaka Umeda, Rumiko Imura, Yuki Watanabe and Hidehiro Watanabe
- 999** Reply to “Comparative evaluation of the microbicidal activity of low-temperature sterilization technologies to steam sterilization”
Randal Eveland

Letter in Reply

- 1000** Reply to Randal W. Eveland regarding comparative evaluation of the microbicidal activity of low-temperature sterilization technologies to steam sterilization
William A. Rutala, Maria F. Gergen, Emily E. Sickbert-Bennett and David J. Weber

MICROBIAL SURVEILLANCE TESTING MADE EASY

Healthmark offers the One-Two Punch to Identify and Document the Efficacy of Your Endoscope Reprocessing

SCREEN WITH THE **NOW! TEST**

*Rapid Indicator of
Gram-Negative bacteria*

Immediate, practical screening test. Simply flush the lumen of a flexible endoscope, such as a duodenoscope, and follow the procedure for gram-negative bacteria detection in less than 12 hours.

< 10 CFU

 **healthmark**

AUDIT WITH THE **FLEXIBLE ENDOSCOPE SAMPLING KIT**

Surveillance tool for the random testing of duodenoscopes in compliance with CDC guidelines - In association with Nelson Laboratories

A simple and complete kit. After flushing and brushing the lumen and elevator mechanism of a duodenoscope, simply follow the procedure to have the sample solution & brush heads quickly sent to Nelson Laboratories - the leader in independent testing of flexible endoscopes. All tools are included for testing and shipment.

Infection Control & Hospital Epidemiology (ISSN 0899-823X) is published monthly by Cambridge University Press, One Liberty Plaza, New York, NY 10006, USA.

Editorial Office

Communications should be addressed to the Editor, *Infection Control & Hospital Epidemiology*, One Liberty Plaza, New York, NY 10006 (email: iche.managingeditor@cambridge.org). Contributors should consult the Instructions for Contributors, which is available at the journal's Web site.

Advertising

Please direct advertising inquiries to M. J. Mrvica Associates, 2 West Taunton Avenue, Berlin, NJ 08009 (e-mail: mjmrvica@mrvica.com; telephone: 856-768-9360, fax: 856-753-0064). Publication of an advertisement in *Infection Control & Hospital Epidemiology* does not imply endorsement of its claims by the Society for Healthcare Epidemiology of America, by the Editor, or by Cambridge University Press.

Permissions

Articles may be copied or otherwise reused without permission only to the extent permitted by Sections 107 and 108 of the US Copyright Law. Permission to copy articles for personal, internal, classroom, or library use may

be obtained from the Copyright Clearance Center (<http://www.copyright.com>, email: info@copyright.com). For all other uses, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale, please contact Cambridge University Press. Full details may be found at: www.cambridge.org/about-us/rights-permissions.

Subscriptions

The individual subscription rate for 2020 is \$287. Individuals have the option to order directly from Cambridge University Press. Institutional print + electronic and e-only subscriptions are available from Cambridge University Press and include unlimited online access; rates are tiered according to an institution's type and research output and may be reviewed at the journal's homepage on Cambridge Core: cambridge.org/ICHE.

Please direct subscription inquiries and requests for back issues to Customer Services at Cambridge University Press, e-mail: subscriptions_newyork@cambridge.org (USA, Canada, and Mexico) or journals@cambridge.org (outside of USA, Canada, and Mexico).

Postmaster: Send address changes to *Infection Control & Hospital Epidemiology*, Cambridge University Press, One Liberty Plaza, New York, NY 10006 USA.

About the cover:

Since 2015, the cover format of each volume of *Infection Control and Hospital Epidemiology* has been changed to honor one of the many professionals throughout history who recognized not only how disease might be spread but also how those principles could be applied to reduce healthcare-associated infections.

Sir John Pringle (1707–1782) was born into a prominent Scottish family. He initially studied the classics and philosophy followed by 1 year of medical study at the University of Edinburgh. He planned to leave medicine for a mercantile career. While in the Netherlands, Pringle met Boerhaave, and his interest in medicine was re-energized. He received his medical degree in 1730 from the University of Leyden. In 1734, he assumed a chair in the Faculty of Arts in “Pneumatical and Ethical Philosophy” and practiced medicine at the University of Edinburgh.

At the age of 35, Pringle was appointed surgeon to the British Forces, which had formed an alliance with the Habsburg Dynasty against France. In 1745, as Physician General of the Army, Pringle played a role in assuring the humane treatment of prisoners of war and neutrality for military hospitals hundreds of years before the Geneva Convention and the formation of the Red Cross.

In 1748, Pringle returned to London and published his experiences in military hospitals. He recognized that hospital fever and jail fever were spread from person to person and that both syndromes were due to typhus. He mandated that prisoners be washed, that their clothing burnt, and that clean clothes be provided at public expense. He understood that hospitals were a major cause of patient sickness: crowding, filth, and lack of hygiene facilitated the spread of disease. Decades before Florence Nightingale, Pringle advocated for fresh air, cleanliness, and hygiene. He observed that fomites contaminated with body fluids, like bedding, spread sepsis. He adopted microscopy and understood that the mites he saw caused scabies. Many years before Lister and Semmelweis, Pringle used acids and distilled spirits to reduce the spread of sepsis, and the first use of the term “antiseptis” was attributed to him.

During his lifetime, Pringle was recognized for his work as President of the Royal College of Physicians (RCP), Member of the Academy of Sciences, and receipt of the prestigious Copley Gold Medal. He was made a Baronet in 1766 and physician to the King in 1774. By 1780, he retired from medicine and returned to Scotland, but the cold climate did not agree with him. Pringle returned to London, but not before he gifted 10 volumes of his *Medical and Physical Observations* to the RCP (Edinburgh) with the understanding that they would never be published or lent out. He died 4 months later.

The major advances in infection control that Pringle made to the field have too often been attributed to others, and few reminders of him survive to this day. His birthplace was demolished and his grave destroyed during World War II; 2 paintings remain. A memorial to Sir John Pringle can be found in Westminster Abbey albeit in Poets’ Corner; this location is ironic, as one friend noted that an inadequate appreciation of English poetry was one of Pringle’s few failings.

INFECTION in the time of RESISTANCE

One Patient at a Time

Online CME/CPE HABP/VABP Activity

This activity was originally planned for SHEA Decennial 2020. Although we were unable to present live, we are pleased to provide you online access to this high-quality and timely content.

Educational Overview

The past decade has seen a growing diversity of bacterial resistance mechanisms and the global rise and spread of multidrug-resistant (MDR) pathogens. These infections pose a significant health threat and burden to individuals and healthcare institutions. In the US, the CDC estimates that at least 2.8 million people acquire antimicrobial-resistant infections annually that result in at least 35,000 deaths. The diversity and spread of MDR and XDR (extensively drug-resistant) organisms challenge clinicians and substantially impact patient outcomes and healthcare costs. As a result, healthcare providers must be fully knowledgeable and remain up-to-date of the local epidemiology and resistance trends as well as recognize the latest tools available that aim to minimize the burden of these infections. These tools include rapid diagnostics and newer antimicrobials that can overcome resistance mechanisms and allow for pathogen-specific therapy. In this manner, clinicians have a greater ability to tailor management approaches based on patient factors and needs.

Learning Objectives

At the conclusion of the educational activity, the learner should be able to:

- Summarize the changing epidemiology of antimicrobial resistance in relation to prevalence and resistance mechanisms
- Differentiate the pharmacology and antibacterial activity of newer antimicrobial agents to combat antimicrobial-resistant infections
- Identify strategies aimed to guide appropriate antimicrobial selection to optimize outcomes and reduce resistance development

Target Audience

This continuing medical education activity meets the needs of ID healthcare providers, including physicians, pharmacists, and microbiologists, in a variety of practice settings, including large and small health systems, outpatient clinics, managed-care organizations, long-term care facilities, and academia.

Please scan the QR code to access activity or view at www.vemcomeded.com

Faculty

Robert A. Bonomo MD, FIDSA
Professor of Medicine
Case Western Reserve University
School of Medicine
Chief, Medical Service
Louis Stokes Cleveland Department
of Veteran Affairs Medical Center
Northeast Ohio VA Health Care System
Cleveland, OH

Keith A. Rodvold PharmD, FCCP, FIDSA

Chicago, IL

Accreditation - Physicians

This activity has been planned and implemented in accordance with the accreditation requirements and policies of the Accreditation Council for Continuing Medical Education through the joint providership of Center for Independent Healthcare Education (Center) and Vemco MedEd. Center is accredited by the Accreditation Council for Continuing Medical Education to provide continuing medical education for physicians. Center designates this Enduring material for a maximum of 1.5 *AMA PRA Category 1 Credit(s)*[™]. Physicians should claim only the credit commensurate with the extent of their participation in the activity.

This activity is also accredited for Physician Assistants, Nurse Practitioners, and Pharmacists. For questions regarding accreditation, please contact info@jointsponsor.com

Disclosures of Conflict of Interest

Center for Independent Healthcare Education and Vemco MedEd require faculty, planners, and others who are in a position to control the content of continuing education activities to disclose to the audience any real or apparent conflict of interest related to the activity. All identified conflicts of interest are reviewed and resolved to ensure fair balance, objectivity, and scientific rigor in all activities. The faculty is further required to disclose discussion of off-label uses in their presentations.

Supported by an educational grant from Merck & Co., Inc.
