Exploring New Frontiers in the Life Sciences

Protein Science

Published for the Protein Society, **Protein Science** is dedicated to the exploration of all scientific aspects of protein molecules, the 'building blocks of life'. Appearing monthly this innovative journal presents research by leading scientists, encompassing many research settings and methodologies, and cutting across restrictive disciplinary lines. The wide scope of **Protein Science** includes the structure, function and biochemical significance of proteins, their role in molecular and cell biology, genetics and evolution, as well as their regulation and mechanism of action.

Electronic Protein Science

As a leading innovator in scientific publishing technologies, **Protein Science**, now publishing Volume 5, is continually enhancing its electronic dimension. For 1996, it will have on-line text and graphics, providing faster publication and greater access to original proteins research.

Members of The Protein Society have access to the 1996 electronic edition without additional charge.

Features

- Full length original research papers & shorter contributions
- On the Record – concise reports of recent developments
- Recollective series – significant discoveries & how they influenced the subsequent course of scientific pursuits are recalled
- Rapid publications
- Lists of forthcoming papers
- Corporate members news
- Calendars of meetings
