## LUNACY: ITS PAST AND ITS PRESENT.

By DR. GARDINER HILL,

Author of "The Non-Restraint System of Treatment in Lunacy."

"Dr. Hill could hardly have advanced his own claims to be considered the founder in this country of the non-restraint system, without such an epitome of the treatment of the insane as he here presents to us; nor could he have proved the efficacy of that system without evidence which abundantly establishes his title as its originator. Honour to whom honour is due; and to our mind Dr. Hill satisfactorily proves his claim to the award. Dr. Hill has on record abundant testimonials not only to the undeniable efficacy of his system, but to his own ability as its inventor and founder."—*Examiner*.

"We think it but fair that the evidence furnished by Dr. Gardiner Hill should be adduced, and we hold it to be conclusive. Truth compels us to say that the evidence of his claims to the great honour of being the first to do away with mechanical methods of restraint is indisputable. Thus, in the words of Dr. Conolly, the non-restraint system became established at Lincoln. To Dr. Gardiner Hill this great merit was due; to his lectures, indeed, on Lunatic Asylums, delivered at the Mechanics' Institution, at Lincoln, in 1838, Dr. Conolly owed the happy inspiration which led him to embrace the new doctrine."—*Edinburgh Review*.

LONDON: LONGMANS, GREEN, & Co., Paternoster Row.

## THE NORTH OF ENGLAND SANITARIUM,

A Select Temperance Home, for Ladies exclusively.

Is delightfully situated on the north bank of the river Tyne, amidst a landscape seldom equalled in rich variety and extent, two miles east from Haltwhistle railway-station, telegraph and post office; and about as far west from that of Bardon Mill, midway between Gilsland and Hexham; all near to that grandest and most interesting of anti-quarian relics in Britain—the Roman Wall.

The remarkable healthfulness of the locality conspicuously indicates Hightown as naturally adapted for the important use to which it is devoted. Of the 623 districts into which the Registrar-General has apportioned England and Wales that of Bellingham, ten miles to the north-east of Hightown, with a population of 7000, stands alone as the most healthful; and two of the three next after Bellingham—viz., Glendale and Rothbury—are also in Northumberland. The atmosphere is most invigorating, and replete with ozone. The height above the sea-level is 350 feet; which according to Weber (see p. 182 of the "Proceedings of the Roy. Med.-Chir. Soc. of London," for May 1869), is so essential to invalids. The annual rainfall is the English average, about thirty inches (see the yearly publication by Mr. Symons, 136, Camden-road, London), such as the laws of nature require for the maintenance of health. The water supply is practically unlimited, and of the rarest excellence for every purpose, from a lively uncontaminated brook, and a copious natural fountain. Hightown stands on its own gentle eminence, naturally sheltered on all sides, except the south, by an amphitheatre of high land, which especially protects it on the north.

All the rooms are ventilated in the most efficient yet agreeable manner, and are thoroughly sunned and cheerful; in fact, the Sanitarium combines the usual comforts of a town residence, with the perfections of a country-house, equally adapted for winter and summer. The number of boarders being limited, Mr. and Mrs. Hurman, assisted by their two daughters, can guarantee the fullest attention to each individual.

No case of legally-defined insanity can be received; but those afflicted with Dipso-mania will meet with the kindest and most successful treatment.

Address—Mr. HURMAN, Hightown, Haltwhistle, Northumberland.

## DR. CHAPMAN'S SPINE-BAGS (PATENT),

For the Treatment of Disease through the agency of the nervous system, by the application of Dry, Cold, and Heat along the Spine.

These bags are of two kinds, each being also varied in size according to the requirements of the patient.

One kind, used chiefly for the application of ice, is divided into two, three, or more cells, either by external clamps or by internal septa, in order to hold the ice or iced-water in apposition with the whole or any part of the back, the patient being enabled to remain upright or to walk about meanwhile. The mouth of each of these bags is closed by a clamp. The other kind, used chiefly for the application of heat, but also of moderate degrees of cold, consists of two parallel tubes, a little distance apart, and communicating at top and bottom, the mouth of the bag being closed by a screw.

"The Ice-Bag, which has evidently been constructed with a great amount of thought, is divided into cells, and closed by a very ingenious clamp. Its arrangements enable it to be worn by persons moving about. The Water-Bag consists of two parallel India rubber tubes for the application of hot or cold water on either side of the spine. The bags are intended to enable the practitioner to carry out those 'vasomotor nerve' views of the treatment of disease which were enunciated by Dr. Chapman in this Journal, July 18, 1863."—MEDICAL TIMES AND GAZETTE, July 23, 1864.

The Spinal Ice-Bag, when applied in appropriate cases, is *soothing and agreeable*, as well as *curative*.

### AGENTS.

LONDON:—C. MACINTOSH & Co., the Manufacturers, 83, Cannon Street, E.C.; S. MAW and SON, 11, Aldersgate Street, E.C.; J. G. GOULD, 198, Oxford Street, W.  
GLASGOW:—THOMAS CHAPMAN, 56, Buchanan Street.

And may be had by order of all Druggists.

*Second Edition, price 6s., cloth.*

## THE PRACTICAL NATURE OF THE THEOLOGICAL

WRITINGS OF SWEDENBORG, in a letter to the (late) Archbishop of Dublin.

By the REV. AUGUSTUS CLISSOLD, M.A.

LONDON: Longmans, Green, and Co.

## THE GLASGOW MEDICAL JOURNAL,

Edited by a Committee of the Glasgow and West of Scotland Medical Association.  
Published Quarterly. Annual Subscription, 12s.—Contents of May Number—

Plate illustrating Report of Brain on an Aphasic (in last number).

ORIGINAL ARTICLES.—1. The Forces which carry on the Circulation of the Blood, by Prof. Andrew Buchanan (with several woodcuts). 2. Case of Extra-uterine Pregnancy, by John Wilson, M.D. 3. The Temperature of Children in Pleurisy, by James Finlayson, M.D. 4. A Case of Secondary Aneurism of the Popliteal Artery with remarks, by Eben Watson, M.D. 5. A Case of Recovery after Rupture of the Uterus, by David Blair, M.D. 6. On Epidemic Scarlet Fever, by David Easton, M.D. 7. Notes on the Hydrate of Chloral, by Alex. Maxwell Adams, M.D. 8. Clinical Surgical Notes, by Prof. G. H. B. Macleod (with several woodcuts). 9. Short Communications—1. On the Theory of the Action of Chloral, by Dr. Russell; 2. Hereditary Malformation of the Extremities, by Dr. M'Kellar.

REVIEWS.—Spence's Surgery, etc. etc.

CLINICAL RECORD from Hospital & Private Practice.

EXCHANGE JOURNALS.—Abstract of Virchow's Archiv, vol. xlix, parts 1—3 inclusive, etc., etc., etc.

N.B.—This number has been delivered to those only of the Members of the Association who have paid their subscriptions for the year.

GLASGOW: Dunn and Wright, 26, West Nile Street.

*Price 1s. 6d. Monthly.*

## THE PRACTITIONER, a Monthly Journal of Therapeutics.

Edited by F. E. ANSTIE, M.D., F.R.C.P., Senior Assistant Physician to Westminster Hospital, and Lecturer on Materia Medica in Westminster Hospital School.

No. XXV. for July, 1870, contains:—

ORIGINAL COMMUNICATIONS.—C. Bins, M.D. On Quinine and Alcohol in Paralytic Fever. George Lawson, On the Treatment of Distension of the Frontal Sinus from Pent-up Secretion or Pus, with Two Cases, and Illustrations. Eustace Smith, M.D. On the Treatment of commencing Chronic Diarrhoea in Young Children. John C. Thorowgood, M.D. Lond. On the Use of Arsenic in Irritative Dyspepsia. Charles H. Robinson, M.R.C.S.I., L.K.Q.C.P.I., On the Treatment of Herpes Circinatus by Local Astringents. Roberts Bartholow, A.M., M.D., Note on Atropia and its Physiological Antagonists.

REVIEWS.—Clinic of the Month.—Extracts from British and Foreign Journals.—Notes and Queries.—Bibliography.

MACMILLAN and Co., London.
