

# Nutrition Research Reviews

It is hoped to cover the following subjects in forthcoming issues.

**Nutrition in cystic fibrosis**

R. Shepherd and L. Ward, University of Queensland, Brisbane, Australia

**The nutritional significance of anomalies in copper supply and metabolism**

C. F. Mills, Rowett Research Institute, Aberdeen

**Comparative aspects of phosphorus nutritional metabolism**

G. Breves and B. Schröder, Institute of Animal Nutrition, Braunschweig, Germany

**Interorgan nutrient flux in feeding and fasting**

M. Elia, Dunn Clinical Nutrition Centre, Cambridge

**Intra-household food allocation studies**

Erica Wheeler, London School of Hygiene and Tropical Medicine

**Aetiology of kwashiorkor and marasmus**

B. Sivakumar, National Institute of Nutrition, Hyderabad, India

**Fibre as an energy source for man**

G. Livesey, Institute of Food Research, Norwich

**Effects of legumes on fat metabolism**

Susan M. Kingman, Dunn Clinical Nutrition Centre, Cambridge

**Critical evaluation of *in vitro* methods for estimating digestibility**

B. O. Eggum and S. Boisen, National Institute for Animal Science, Foulum, Denmark

**Interactions between diet and drugs**

T. K. Basu, University of Alberta, Edmonton, Canada

**Antinutritional factors in legumes for simple stomached animals**

J. Huisman, T.N.O. Institute, Wageningen, Netherlands

**Micro-nutrient nutrition and immunity**

R. K. Chandra, Memorial University of Newfoundland, St. Johns, Canada

**Renal urea retention and nitrogen utilization, particularly in ruminants**

Lubomir Leng, Institute of Animal Physiology, Košice, Czechoslovakia

**Biological and behavioural adaptation to dietary energy stress**

P. R. Payne and M. Lipton, London School of Hygiene and Tropical Medicine

## *Future issues*

Recommendations for topics and authors in any field of nutritional research are invited. Recommendations should be reasonably precise and must be accompanied by a clear statement on why the proposer thinks that a review of the chosen subject would be particularly timely and why the particular author or group of authors is being proposed. We hope to give as much prominence to authors from overseas, as long as they write well in English, as to those from the United Kingdom. Proposals, all of which will be considered carefully, should be sent to: Dr. R. H. Smith, Nutrition Research Reviews, The Nutrition Society, 10 Cambridge Court, 210 Shepherd's Bush Road, London, W6 7NJ. Proposals for Volume 5 (1992) should be sent to arrive by March 1991.
