

**Two new books for all
nutrition and animal
production experts and
feedstuff manufacturers**

Recent Developments in Ruminant Nutrition

W Haresign and D A Cole

Since feed is a major cost of production, much of the effort to improve livestock production is directed towards nutrition. This book is an important compilation of papers presented at recent University of Nottingham Nutrition Conferences for Feed Manufacturers, which discusses the developments in many important facets of ruminant nutrition and feeding. Will be essential to advisers, research workers, academics and students.

1981 384 pages £7.95 paperback

Recent Advances in Animal Nutrition 1981 Studies in the Agricultural and Food Sciences Series

W Haresign

Continuing improvement in the economic efficiency of livestock production demands continuing research into the nutritional requirements of farm animals and the assessment and development of feedstuffs and feeding methods to meet these requirements. This book discusses recent progress in the nutrition of farm livestock and will be of interest to research workers in animal nutrition and production and commercial feed manufacturers.

1981 192 pages £17.00 hardback

APOLOGY

Volume 33, No. 3 December 1981

Due to industrial action at the printer, the publishers regret the late receipt of the December 1981 issue of *Animal Production*.

Illustrations. The same material should not normally be presented in tables and figures. Legends should be typed on a separate sheet.

- (a) Diagrams should be drawn in Indian ink, about twice the size of the finished block, on Bristol board, stout tracing paper or plastic film. Photographed diagrams are also accepted. Lettering inside the framework of the diagram should be avoided as far as possible but if unavoidable it should be included on a fly-leaf. Marginal lettering should be inserted lightly in pencil on the original diagram or on a fly-leaf.
- (b) Photographs intended for half-tone reproduction should be on glossy paper. They will be accepted only if found necessary by the Editors.
- (c) Colour plates are unlikely to be accepted unless authors bear the cost.

Tables should be as simple and as few as possible. Each table should be typed on a separate sheet.

Abstract. Every article should have a short abstract (not more than **250** words) complete in itself and understandable without reference to the paper. *The abstract will be printed at the beginning of the paper.*

References. Only papers closely related to the author's work should be referred to; exhaustive lists should be avoided. The arrangement of references should be as in recent papers in *Animal Production*; details are given in the notes for guidance.

Proofs are supplied once and must be returned corrected to the Editors *within 3 days*. Only essential corrections should be made.

Reprints. Twenty-five reprints of each paper will be supplied free to authors on request. Further copies may be purchased if the order is sent at the proof-stage.

Animal Production is published six times a year in two volumes. Annual subscription is £41·00 (or \$106·00 in the USA and Canada) and the price for a single part is £7·00 (or \$18·00) net.

Proceedings of the British Society of Animal Production (New Series) ceased publication in 1975 and the material is now published as a separate section in the June issue of *Animal Production*.

Business matters, including regular subscriptions and sales (current and back numbers of the Journal and the Proceedings), should be addressed to: Longman Group Limited, Subscriptions (Journals) Department, Fourth Avenue, Harlow, Essex, England CM19 5AA.
