Principles of Plasma Diagnostics

IAN HUTCHINSON

Plasma physics is currently one of the most active subdisciplines of physics and the measurement of the parameters of laboratory plasmas, termed plasma diagnostics, is becoming increasingly important. This book provides a detailed derivation and discussion of the principles of plasma physics upon which diagnostics are based. These include magnetic measurements, electric probes, refractive index, radiation emission and scattering, and ionic processes.

Principles of Plasma Diagnostics is the most modern and comprehensive book in its field. It unites for the first time a body of knowledge previously scattered throughout scientific literature.

Spectroscopy of Astrophysical Plasmas

Edited by A. DALGARNO
and D. LAYZER

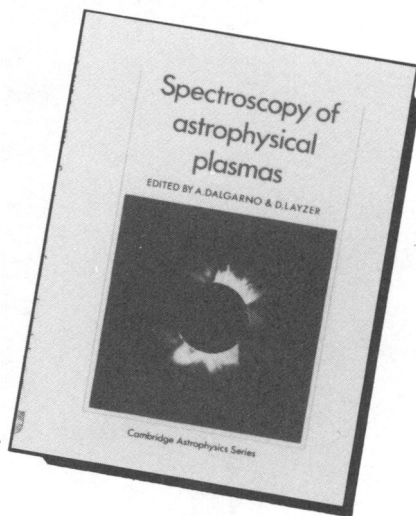

A group of acknowledged experts review the current understanding of astrophysical plasmas in this volume, edited by two distinguished researchers. The book is designed as a textbook introduction to research in astrophysical plasmas and is an excellent pathfinder to the original literature. Its broad sweep enables good coverage to be given to all the situations in which plasmas are encountered in astronomical investigations.

JOURNAL OF PLASMA PHYSICS

Volume 39 Part 1 February 1987

CONTENTS

Nonlinear stage of the modulational instability of a whistler wave. Part 2 V. I. KARPMAN AND A. G. SHAGALOV	page 1
Effects of ballooning instability on tokamak confinement G. FU AND J. W. VAN DAM	11
Hydrodynamic analogy of nonlinear plasma flows S. V. BAZDENKOV AND O. P. POGUTSE	27
Thermodynamic derivation of Saha's equation for a multi-temperature plasma ANGELO MORRO AND MAURIZIO ROMEO	41
Field-driven ion migration against dead-stop collisional braking J. A. GRZESIK	53
Relativistic theory of absorption and emission of electron cyclotron waves in anisotropic plasmas A. OREFICE	61
Ion-acoustic solitons in multi-component plasmas including negative ions at critical densities FRANK VERHEEST	71
Hamiltonian theory of the generalized oscillation-centre transformation B. WEYSSOW AND R. BALESCU	81
Electrostatic Rossby-type ion plasma waves J. F. MCKENZIE AND M. K. DOUGHERTY	103
Electron thermal transport in laser-target plasmas on the basis of Grad's 13-moment transport equations T. J. M. BOYD, R. D. LONSDALE AND J. J. SANDERSON	115
Mean-field magnetohydrodynamics associated with random Alfvén waves in a plasma with weak magnetic diffusion HIROMITSU HAMABATA AND TOMIKAZU NAMIKAWA	139
Effects of parallel ion dynamics on drift-Alfvén vortices in plasmas P. K. SHUKLA	151
